(54) ELECTROPHOTOGRAPHIC TONER COMPOSITION AND IMAGE FORMING METHOD

(57)Abstract:

PURPOSE: To provide the electrophotographic toner compsn. which can be fixed at a low temp. in a heat fixing system and has a good preservable property and, further, can prevent an offset in a heat roll fixing system and the image forming method using the toner compsn.

CONSTITUTION: This electrophotographic toner compsn. contains a capsule toner formed by using polyurea and/or polyurethane having $\leq 150^{\circ}\text{C}$ glass transition point as the resin to constitute a resin shell, forming the resin shell to $0.05\mu\text{m}$ to $0.5\mu\text{m}$ average thickness and sealing a core material contg. at least a binder resin and coloring agent into the resin shell. An electrostatic latent image is formed on the photosensitive body and a toner image is formed by the electrophotographic toner compsn. The toner image obt'd. by transferring the toner image onto a transfer body is fixed by heat, by which the copied image is obt'd.
